NATURAL BEAUTIES as unique as us humans

mafi offers a variety of different colour variations. Different factors play a role. However, the most important colouring feature is always the natural colour of the wood.

The striking colour scheme of mafi Natural Wood Floors is as follows:

- natural colour of the wood
- + a possible thermal treatment
- + surface treatment with appropriate wood floor oil

Specifically, the mafi thermal treatment “Vulcano” allows a variety of natural colours. The domestic woods are dried purely by wind, water and heat and change from light to dark. A comparison of this effect can be made by heating sugar where the sugar becomes darker, more viscous and thus more stable.

nature is our best designer

wood remains wood
with all its positive characteristics
