When choosing the right sports floor,
we advise to take into account these points:

1. Lifetime of the floor
2. Activities to be held
3. Sports hall limits (reconstruction of old floor)
4. Optimal construction choice pricewise

Choice of Wood

For Top Layers of Sports Floor we offer 3 strip Oak, Ash and Beech in thickness 3.5 or 6mm for Long Life products. Any of the presented species can be offered stained. Please note that there is a possibility of making 9 strip flooring on plywood core.

Oak Town

This classical selection of oak has little grain variation and accepts only smaller knots. The boards have a uniform look and small colour variation.

Ash Elite

Finest selection of Ash lamellas with natural light colour and little contrast, free of knots.

Beech City

Top selection of Beech, with naturally light colour and no knots. Colour variation is minimal.

Merbau

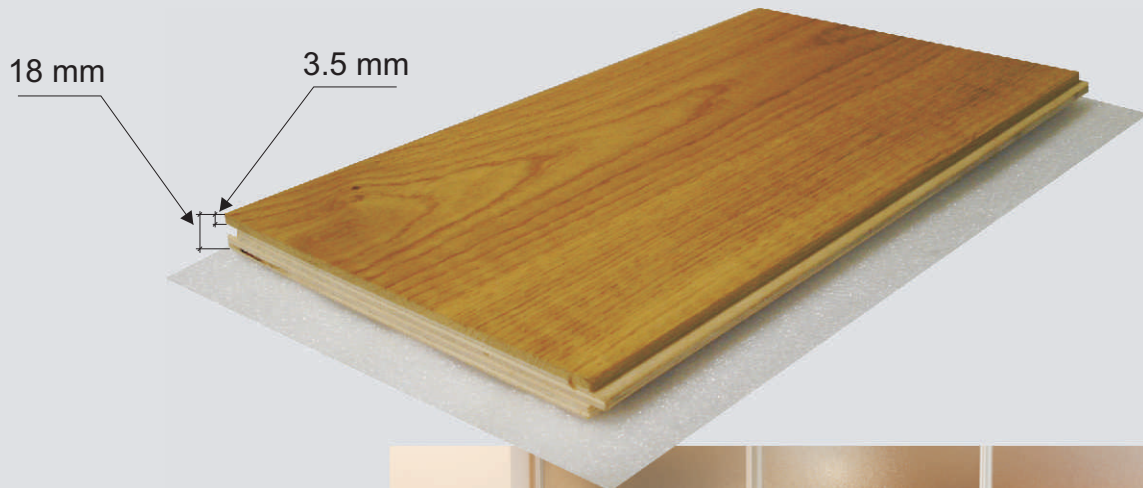

Merbau is one of the hardest woods, with a naturally red tone that always gives a warm feeling to the floor.

Sports and dance floor solutions

Estasport Fitness (1 and 3 strip floor)

- 3 mm thick floor underlay
- 18 mm 2 layer (core: birch) parquet with a T&G locking system and special sports lacquer (Klumpp or Bona) 3.5 mm top layer

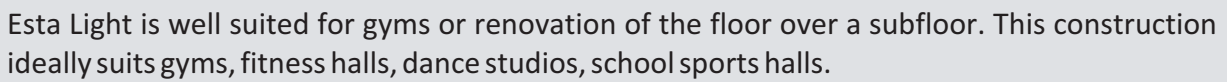

NB! Almost any colour and design can be offered (Please check the gallery for standard parquet at www.estaparket.eu)

Esta Fitness is well suited for private gyms and smaller dance studios, especially where small overall floor height is very important and the hall is not suited for professional sports.

- 15mm thick sports floor underlay
- 9 mm thick birch plywood with T&G on 4 sides
- 14 mm 3 layer (core: birch and pine) parquet with a T&G locking system and special sports lacquer (Klumpp or Bona) 3.5 mm top layer

Sports and dance floor solutions

Estasport Active (Portable floor solution)

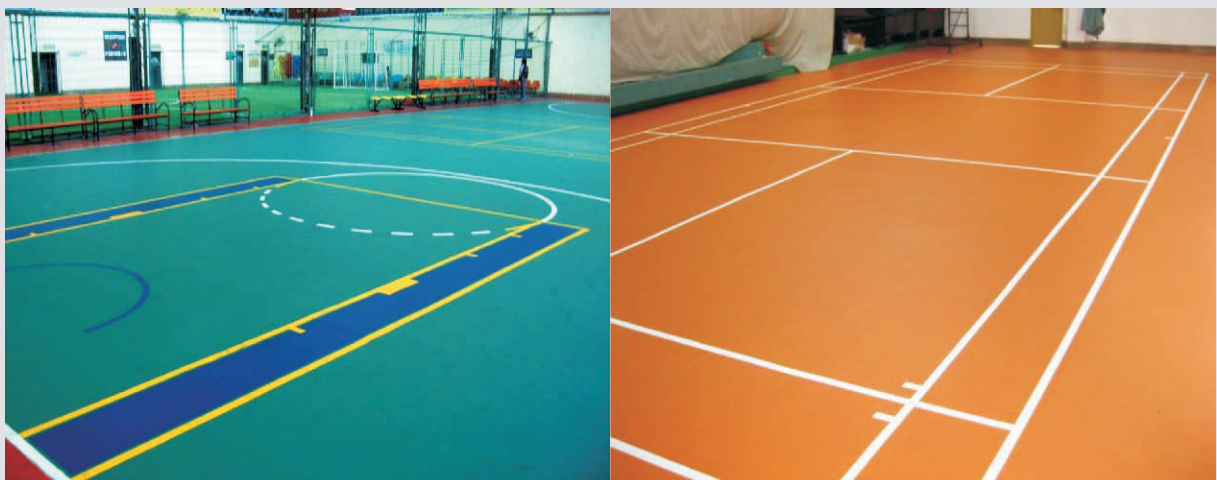

- 5 mm thick sports floor underlay
- 18 mm (core and top: birch plywood) parquet with a CLICK or T&G locking system (unfinished or lacquered with Klumpp or Bona Sports lacquer)

Well suited for floors to be covered with PVC

This type of floor system is best suitable for badminton, squash, handball and any other sports hall where flooring is later covered with vinyl. Finishing the floor with sports lacquer is optional. Since the floor is always covered with PVC, the top-layer of the floor is the same as core. With Click system such floor may be assembled and disassembled several times.

Sports and dance floor solutions

Estasport Pro Long Life

- 15mm thick sports floor underlay
- 12mm thick birch plywood with T&G on 4 sides
- 22 mm , 3 layer with 6mm top (back layer birch and core pine) parquet with a T&G locking system and special sports lacquer (Klump or Bona)

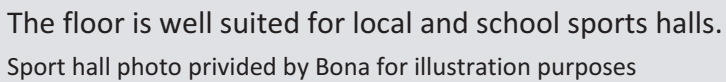

The floor is mainly suitable for local sports halls and school halls. Because of the thick top layer, the floor has the same lifetime as massive floor, but outperforms it in board stability. With proper care and maintenance such floor will last for years and years.

Sport hall photo provided by Bona for illustration purposes

- 15mm thick sports floor underlay
- 9 or 12mm thick birch plywood with T&G on 4 sides
- 22 mm 3 layer (core: birch and pine) parquet with a T&G locking system and special sports lacquer (Klumpp or Bona) 3.5 mm top layer

Maintenance of Floors with Sports Lacquer

Esta Sports floor will perform well for many years, but to keep it looking as good, as it was on the very first date we suggest maintaining the floor regularly. The maintenance program depends on how the floor is used and treated.

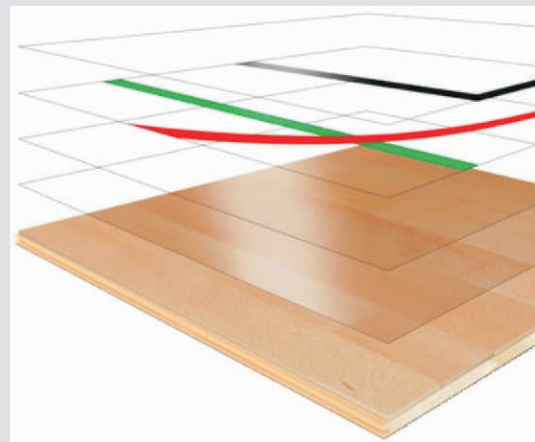

Day to Day Cleaning

In order to keep the floor clean of dust, sweat, dirt, hair etc. the floor must be dry mopped after every day of use. More advanced cleaning should be carried out dependant on the usage of the sports hall, but at least once a week..

Cleaning of sports floor is usually done with a floor care machine with very low water consumption. NB! You need to take care not to over-wet the floor. To make sure no water has seeped in through the equipment frame covers, these will need to be opened and dried.

TECHNOMAR & ADREM is a family owned Company, implementing the latest advancements in wood processing technology. The Company employs in excess of 500 people and is one of the largest employers in Estonia. Warehousing of the company extends to over 12000m². An area of the same size is used solely for the production of value added goods.
