## Crack Bridge

### UZIN RR 203 NEW – Product development since 10/2015

UZIN RR 203 is used every day to repair many cracks, joints and, generally, substrates in need of restoration. The crack bridge compensates minor vibration and movements from the substrate thereby avoiding more elaborate subfloor work or even the complete renovation, saving time and costs. Because of the further development with focus on practical application, UZIN was able to now dispense with using a backing film for UZIN RR 203 NEW. This innovative, no-film and inherently rigid design has made embedding the crack bridge as well as smoothing the surface child's play.

The cutting effort is reduced to a minimum when using the new tiles, providing a decisive advantage in time-savings. The dimensions of the tiles were chosen so that UZIN RR 203 NEW only needs to be cut to length toward the edge zone; this step is even entirely omitted for standard door width of 0.80 m.

In addition to the tile products, the width of the roll material was also adapted to the standard door width of 0.80 m. In the future, UZIN RR 203 NEW will be offered as tile goods and on rolls. All other well-known properties or applications remain unchanged.

UZIN RR 203 NEW is available since 01/10/2015 from PDC Ulm.

Stress-Relieving Board

## UZIN Multimoll Top 4 NEW – Product development from 01/2016

Insulation and Renovation Board

## UZIN Multimoll Top 7 – New product from 01/2016

Comfort Insulation Board

## UZIN Multimoll Top 12 – New product from 01/2016

Pressed synthetic fibre panels are part of the standard solution from UZIN for stress-relieving critical substrates in terms of installation. Apart from their stress-relief effect, the tiles with various material thicknesses are also ideal for height levelling of areas and, in addition, improve impact sound and heat insulation properties. With this consistent further development UZIN has now markedly improved the classic product in the underlay product range and adapted the bandwidth to the prevailing market requirements.

UZIN Multimoll Top 4 NEW

with 4 mm thickness

replaces UZIN Multimoll Top 4

UZIN Multimoll Top 7 with 7 mm thickness

replaces UZIN Multimoll Top 9

UZIN Multimoll Top 12 with 12 thickness

replaces UZIN Multimoll Top 15

With the new material thicknesses, the increments were adapted to the requirement for lower construction thicknesses as well as improved combination options without compromising the technical properties. The new UZIN Multimoll Top boards convince by its clearly increased dimensional accuracy in length, width and thickness as well as the angle tolerance and simplified cutting properties. The panels can now be simply cut in 4 and 7 mm thickness with a sharp utility knife which reduces the required installation time considerably compared to the sawing method. In addition, the cutting pattern, e.g. when processing the 12 mm thick version, was improved when using a saw with a sharp saw blade. Simpler handling combined with the optimised dimensional accuracy produces a much more uniform installation pattern and facilitates faster installation of the tiles.

# New Products | Product Developments

INTERNATIONAL PRODUCT RANGE CHANGES · INSTALLATION SYSTEMS FOR SCREED | FLOORING | WOOD FLOORING

In addition to all these properties, other features of UZIN Multimoll Top were revised and improved. In the future, the panels can be smoothed over with self-spreading UZIN levelling compound using a suitable primer – usually UZIN PE 630 – thereby providing a safe installation substrate for resilient or textile floor covering. Furthermore, in the future the panels will meet the exacting requirements of EMI-CODE EC 1 PLUS.

All other well-known properties or applications remain unchanged.

All 3 qualities of the UZIN Multimoll Top product range are available from 01/01/2016 from PDC Ulm.

Stress-Relieving Underlay

## UZIN Multimoll Vlies NEW – Product development from 01/2016

For many years UZIN Multimoll Vlies has become an established stress-relieving fleece under bonded wood flooring. The product was now optimised further. In the future, the stress-relieving fleece will meet the high requirement of EMICODE EC 1 PLUS and also the fire resistance B<sub>fl</sub> s1. Furthermore, an imprint will be stamped on UZIN Multimoll Vlies NEW to indicate the remaining product quantity making the paper tape so far inserted obsolete. In addition, the dimensions of the roll were reduced from 75 to 50 running metres or m<sup>2</sup> to reduce the weight when carrying the roll.

All other well-known properties or applications remain unchanged.

UZIN Multimoll Vlies NEW is available from 01/01/2016 from PDC Ulm.

Fibre-Reinforced Rubber Flooring and LVT Adhesive

## UZIN KE 66 NEW – Product development from 01/2016

UZIN KE 66 has been the specialist for rubber and PVC floor covering since of 18 years. The wet adhesive with high shear strength and fibre reinforcement is the surest choice especially for luxury floor covering.

The recipe was developed to offer even more advantages to the installer and to be ready for future market demands. In addition, the new adhesive features a working time that is approximately 10 minutes longer although the open time has not changed. This provides the installer with a much longer working time window, offering greater reliability when installing sheet material or working in warmer climates.

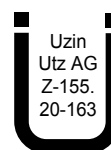

Thanks to using advanced raw materials, especially a different fibre composition, even easier coating can be achieved. The economic TKB notch size A1 can now be used as well for floor coverings with very smooth backing. “Brushing out” fibres is therefore unlikely even when applying small amounts of adhesive.

The changed quality can be seen by the “NEW” designation on the label. Consumption figures, applications or other technical properties remain unchanged.

UZIN KE 66 NEW is available from 01/01/2016 from PDC Ulm, using the same item number.

Universal Tackifier

## UZIN Universal Tackifier NEW – Product development since 06/2015

The UZIN Universal Tackifier has been further developed as part of revising the recipe. The differences become apparent through somewhat easier processing characteristics and a slightly creamier consistency.

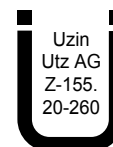

Consumption figures, areas of application or other technical properties are unchanged.

The changed quality can be recognised by the designation “NEW” on the label.

UZIN Universal Tackifier NEW is available since 01/06/2015 from PDC Ulm, using the same item numbers.

1-Component STP Wood Flooring Adhesive

## UZIN MK 250 T – New product from 01/2016

The application of wood flooring adhesives with the adhesive application machine UZIN ATD 100 enjoys increasing popularity. To expand the range of use of UZIN ATD 100 the 1-component Premium STP wood flooring adhesive UZIN MK 250 will be offered in tube bag packaging in the future with the name extension “T” (stands for thixotropic). This sustained, ergonomic and efficient application method also allows processing solid wood flooring, such as mosaic wood flooring or edge-laid strips with machines and ergonomically. The thixotropic setting of UZIN MK 250 T thereby allows fabrication without after-running at the nozzle end of the machine.

Although processing UZIN MK 250 T directly from the tube bag with the notched trowel in conventional fashion is possible, it is rather cumbersome because of the high-viscosity formula.

Consumption figures, applications or other technical properties remain unchanged compared to UZIN MK 250.

UZIN MK 250 T in tube bags is available from 01/01/2016 from PDC Ulm.

Wood Flooring Adhesive Dispenser

## UZIN ATD 100 NEW – Product development from 02/2016

Wood flooring adhesives can be processed easily, ergonomically and sustainably with UZIN ATD 100 while standing. This application technique is increasingly accepted by the market. To simplify handling even further UZIN has developed an optional stand. The transport box serves as base for the supports; they have been adapted to the size of the UZIN ATD 100 at its topside, a rubber liner ensures the secure support of the machine. This stand thus allows loading and cleaning the adhesive application machine conveniently while standing.

To increase the installation rate even further, the familiar 18.5 cm wide ATD nozzle + mounting is replaced by a 40 cm wide version. In order to facilitate retrofitting and achieving maximum flexibility, both versions of the ATD nozzle + mounting will supplement the UZIN product range in the future.

The new equipment of the machine as well as all accessory items are available from 01/02/2016 from PDC Ulm.

Item No.	Item	Nozzle width	Shipping Unit	EAN-Code

Cementitious wall levelling compound

## UZIN WP 622 – New product from 01/2016

The newly developed wall levelling compound UZIN WP 622 is the ideal product for filler applications and preparation of wall surfaces in low-thickness areas up to 10 mm. It is suitable for manufacturing dry-for-covering, smooth, easy to sand surfaces prior to further processing of wall and ceiling areas.

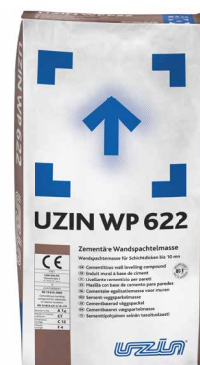

### The outstanding benefits of UZIN WP 622:

- Outstanding mixing characteristics
- Very easy to apply
- Very short drying time
- Very easy to sand

UZIN WP 622 is the ideal product for use, e.g. in renovation areas (repair in the skirting/wall area) or gymnasiums (filler application of walls before bonding impact walls) and thus the ideal system product for the water-based contact adhesive UZIN WK 222.

Regarding the emission characteristics UZIN WP 622 meets the high requirements of EMICODE EC 1 R PLUS.

UZIN WP 622 is available from 01/01/2016 from PDC Ulm.

Dustreducing opening aid for paperbags

## UZIN Ripper – New product from 01/2016

To reduce the dust pollution for the installer when opening paper bags and to facilitate low-dust mixing of powder products, UZIN has developed the bag opening tool UZIN Ripper.

Using the UZIN Ripper, protected as registered design, reduces the dust formation considerably when opening bags and mixing powder products. This visibly improves the working conditions for the installer. Undesired dust deposits, especially with renovations in the residential area respectively on going business, are reduced.

The occupational associations recognise the UZIN Ripper as alternative to dust-reduced dry mortars (levelling compounds or tile adhesives). This allows avoiding the – from sustainability aspects – unfavourable dust-reduced modification of dry mortars by using a simple tool.

The sturdy design fits perfectly on the UZIN mixing bucket. It can also be used on mixing buckets from other providers if they have the same design.

Furthermore, as a clue all paper bags of self-levelling compounds will be supplied with a dashed line on the back of the packaging. This serves as an aid to orientation to place the UZIN Ripper in centre.

The UZIN Ripper is available from 01/01/2016 from PDC Ulm.

## UZIN Levelpin NEW – Product development since 11/2015

When carrying out levelling work with self-spreading levelling compounds on thick layers or thin screeds the UZIN Levelpin is a useful tool for smoothing uneven substrates quickly and easily. The UZIN Levelpin NEW features improved adhesive strength toward the substrate, which is important for slightly dusty or sandy/rough substrates.

Scaling can be recognised very clearly in the future because it is presented in black. In addition, it not only indicates centimetres but also inches. This means that thicknesses up to 10 cm or 4" can now be set.

The optimised UZIN Levelpin NEW is available since 01/11/2015 from PDC Ulm.

## UZIN Solid board notched trowel NEW – Product development from 02/2016

Installation of large-format wood flooring elements and floorboards becomes even more reliable with the UZIN Solid board notched trowel. A higher tooth allows better wetting of the backing of the wood flooring thus preventing undesired hollow spots.

An additional tooth was simply increased in height and both were rearranged to further simplify the application of adhesive. Application of adhesive in curved lines is thereby possible without “flattening” the higher ridge.

Beyond this, the UZIN Solid board notched trowel NEW will be incorporated in the UZIN product range as tooth profile with width of 21 cm and 28 cm for use with the adhesive trowel Ergo-Star or all other commercially available interchangeable spatulas.

UZIN Solid board notched trowel and tooth profile are available from 01/02/2016 from PDC Ulm.

Item No.	Width / Type	Shipping Unit	EAN-Code

## UZIN paper bags / primers / adhesives – New with pictograms

At UZIN, product-specific properties had been presented until now in text format in different languages. This often meant laborious searching by the user for characteristic product properties. For example, the installer had to find the required amount of water, processing temperature or other information in the text.

Using pictograms will make life easier for the user.

The pictograms are arranged on the back of the packing in a central block and independent of a particular language. The respective information is short, concise, and the visual illustration will be easily remembered.

The first bags with the new layout using pictograms have already been delivered in June 2015. All paper bag products will be converted successively in the coming months.

Following the UZIN NC 172 BiTurbo as an example to provide an overview of all pictograms used at UZIN and their respective meaning.

	The area of application: Suitable for interior use on the floor		Minimum shelf life 6 months		Approx. 15 minutes processing time		Suitable for forklift traffic (very high point loads) from a thickness of min. 3 mm
	Ready for foot traffic after approx. 60 minutes		Levelling compound suitable for pumping		Processing temperature in the range of 15 °C – 25 °C or 60 °F – 77 °F		Grindable after 2 hours
	Consideration of the UZIN product data sheet		Levelling compound can be applied with wiping blade		Consumption per m² per mm thickness		Resistance to castors from a thickness of min. 1 mm
	Suitable for underfloor heating		Use 6 – 6.5 l of water per 25 kg of powder				

# All about the product

INTERNATIONAL PRODUCT RANGE CHANGES · INSTALLATION SYSTEMS FOR SCREED | FLOORING | WOOD FLOORING

Analogous to the paper bags, the primer labels and adhesive labels will also receive pictograms successively. Again, quick access to the key information, independent of a particular language, shall be provided to the user.

Below an overview of the pictograms used and their respective meaning.

## UZIN primers:

	Consideration of the UZIN product data sheet		Resistance to castors		Suction off area thoroughly before application		Suitable for underfloor heating
	Frost-resistant, for exterior and interior use on floor and wall		Final strength		Shake before use		Minimum shelf life 12 months
	The area of application: Suitable for interior use on floor and wall		Ready for foot traffic		Application with roller / consumption		Stir before use
	Processing temperature in the specified range		Processing time		Avoid pooling		Processing with nylon fibre roller or TKB-B2 notched trowel possible

## UZIN adhesives:

	Consideration of the UZIN product data sheet		Seam sealing		Suitable trowel notch sizes / consumption		Mixing ratio of component A to B
	Processing temperature in the specified range		Processing time		Working time		Open time
	Resistance to castors		Suitable for underfloor heating		Load bearing		Minimum shelf life 12 months

## New packaging variation since 06/2015 – CUBE it simple

With the new **CUBE it simple** packaging concept UZIN revolutionises packaging for liquid products such as primers. The new packaging, which will replace the plastic canisters in the long run, consists of a very sturdy resealable plastic pouch with an outer carton packaging.

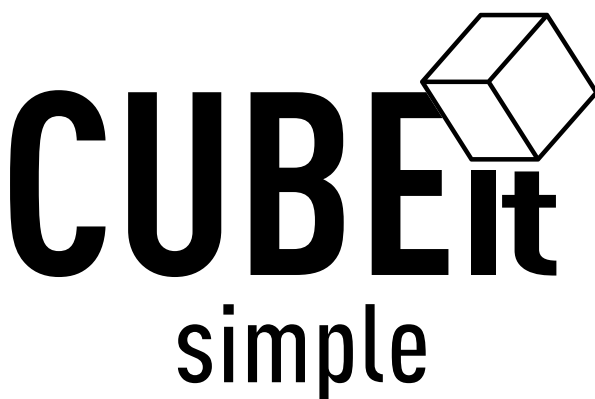

The extensive and intensive development with focus on practical usefulness of this packaging provides the installer with many advantages, reaching far beyond environmental protection. For example, the content of **CUBE it simple**, compared to the canister, can be emptied in a fraction of the time. In addition, emptying **CUBE it simple** is gurgle-free thereby providing maximum protection from material splashes or spilling that may occur from gurgling canisters.

Complete emptying is also facilitated by **CUBE it simple**.

Because the volume of **CUBE it simple** can be ideally utilised, the pallet factor can be significantly increased with the new packaging. Compared to the plastic canisters, the material amount per pallet space thus increases by 120 kg for 10 kg containers and even by 190 kg for 5 kg containers. This reduces the required space significantly and, at the same time, saves storage costs compared to canisters.

At the same time, the space demand for empty containers after processing is also reduced by 85 % since the cartons can be folded in a space-saving manner. The plastics scrap is also reduced through **CUBE it simple** by almost 75 % compared to conventional canisters thereby actively contributing to the conservation of resources. Combined with the outer carton packaging, sustainability of this packaging significantly increases compared to conventional canisters.

The new packaging format will be used with UZIN PE 360 PLUS, UZIN PE 260 and UZIN TERRAPRIMO 10 since June 2015. The canister variations are no longer available as of January 2016.

**CUBE** it  
simple

## UZIN PE 360 PLUS – CUBE it simple since 06/2015 UZIN PE 260 – CUBE it simple since 06/2015

Since June 2015 the packaging format of UZIN PE 360 PLUS and UZIN PE 260 is supplied with the very sturdy and advanced Bag-in-Box solution **CUBE it simple**.

The 2-stage conversion of packaging began with the complete conversion of the 5 kg plastic canisters to **CUBE it simple** and with an additional item for 10 kg containers.

Planned for 01/01/2016 **CUBE it simple** will replace also the 10 kg plastic canisters of UZIN PE 360 PLUS and UZIN PE 260. The canister variations are no longer available as of January 2016.

The new containers for UZIN PE 360 PLUS and UZIN PE 260 are available since June 2015 from PDC Ulm. The 5 kg container keeps the same item number.

## 2-Component Epoxy Moisture Barrier

### UZIN PE 480 – New pack size since 05/2015

To meet the requirements for small room sizes, a metal bucket with 5 kg capacity was added to the product offering with UZIN PE 480 in addition to the existing container size.

UZIN PE 480 5 kg is available since 01/05/2015 from PDC Ulm.

Item No.	Pack size	Shipping Unit/ Carton	Shipping Unit/ Pallet	Consumption	Colour	EAN-Code

## 2-Component Epoxy Primer-Sealer

### UZIN PE 460 – New pack size from 01/2016

In addition to the existing pack sizes UZIN PE 460 will be included in the product offering with a small pack size as combination package with 0.75 kg content. This small packaging unit is ideal for the “residual quantity supplement” for unfavourable rooms sizes, injection under hollow spots, e.g. for bonded screed, for sealing small areas or for minor screen repair when mixed with quartz sand.

UZIN PE 460 0,75 kg is available from 01/01/2016 from PDC Ulm.

Item No.	Pack size	Shipping Unit/ Carton	Shipping Unit/ Pallet	Consumption	Colour	EAN-Code

Rapid Dispersion Wood Flooring Adhesive of the latest Generation

## UZIN MK 85 Turbo – New packaging variation from 02/2016

UZIN MK 85 Turbo with its extremely fast initial drying and setting properties offers optimal security with wood flooring installation, even on dense substrates, without affecting the wood moisture. Installed areas can therefore be sanded or surface-treated already after 24 hours.

These innovative properties do not only make UZIN MK 85 Turbo a superior area adhesive but also an excellent repair adhesive. UZIN now offers an additional packaging version for this type of application in the size of 310 ml cartridges.

Minor repair work, such as replacing individual mosaic wood flooring elements, can be performed without problem with the cartridge adhesive. Any adhesive pressed upward in the joint area is much less and sometimes not visible at all because of the red-brown colour, compared to commercially available structural adhesives.

UZIN MK 85 Turbo in 310 ml cartridges is available from 01/02/2016 from PDC Ulm.

Item No.	Pack size	Shipping Unit/ Carton	Shipping Unit/ Pallet	Consumption	Colour	EAN-Code
79731	310 ml cartridge	12 x 310 ml	–	acc. to application	red-brown	4024709797319
