VESCOM

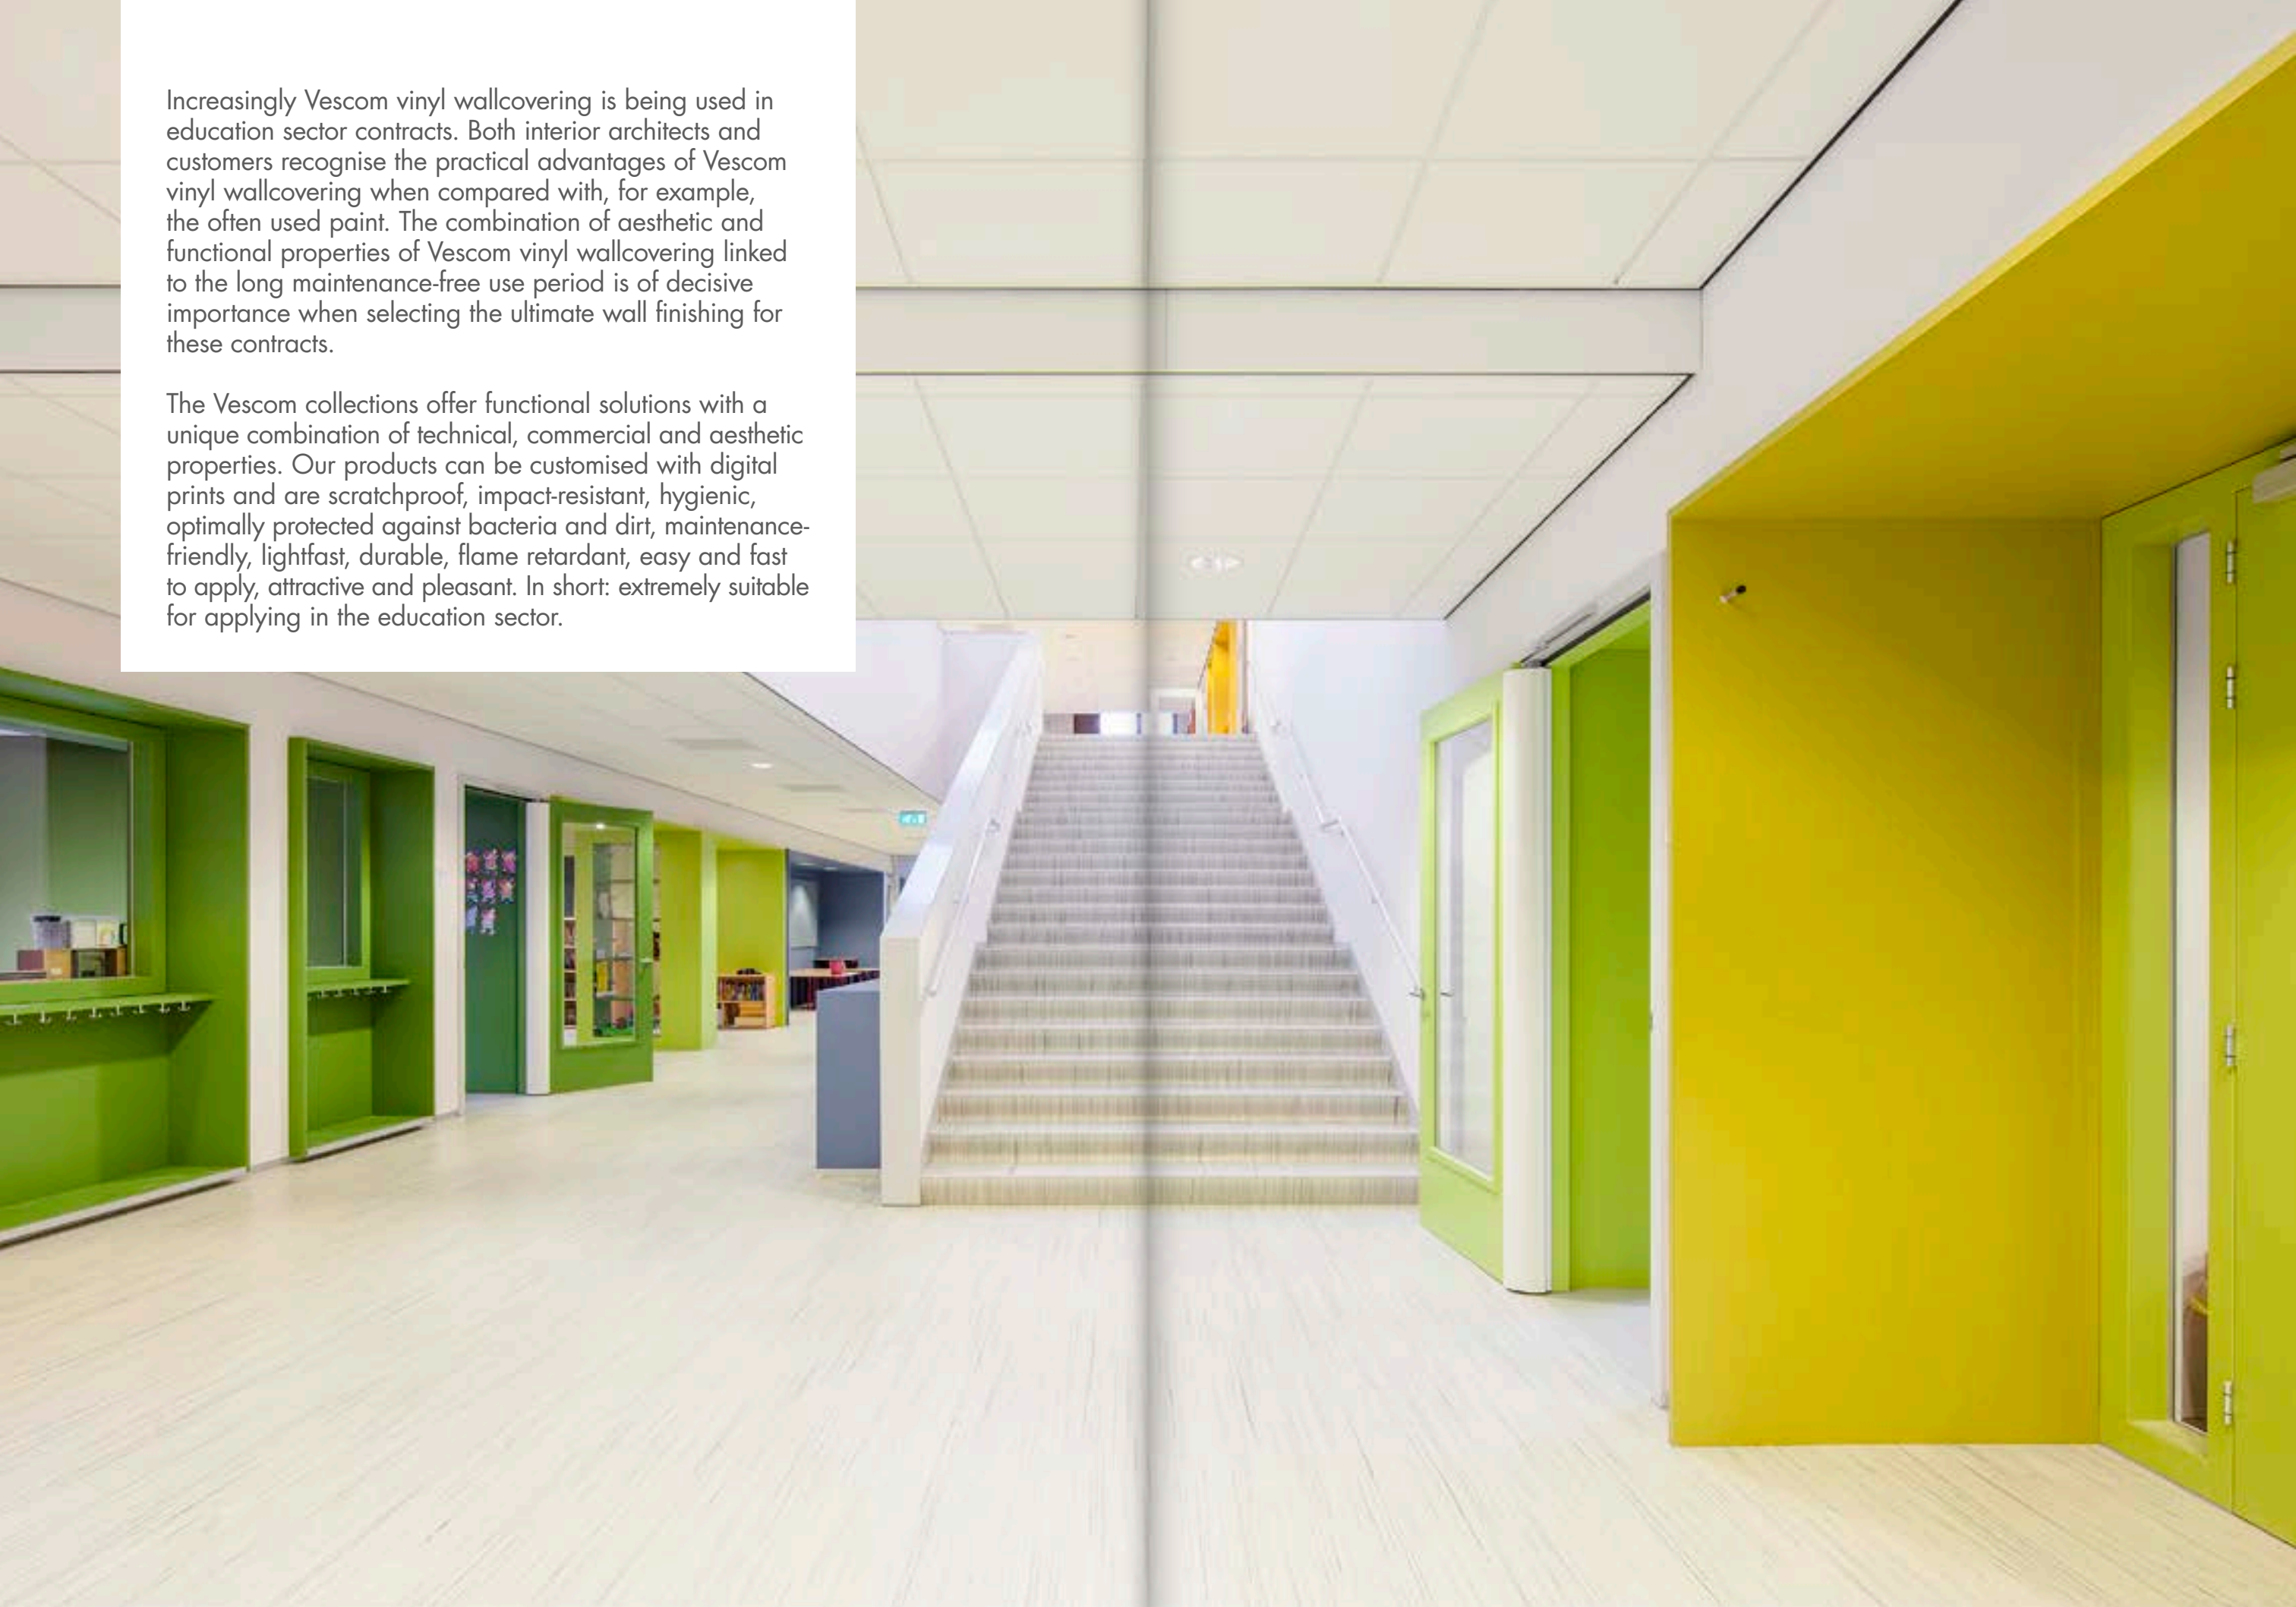

learning, playing and studying in an environment that everybody appreciates

Educational institutions set high requirements for interior products. Not just in the area of hygiene and safety but also with regard to durability, affordability and mood. The importance of a pleasant and inspiring learning environment for children and students has been recognised.

Vescom supplies wallcovering, upholstery and curtain fabrics for education sector contracts. Buildings that are used by large student flows on a daily basis. This requires products that can stand up in tough environment. Vescom has been involved in this market for many decades. Our products optimally meet the performance requirements set within education.

Increasingly Vescom vinyl wallcovering is being used in education sector contracts. Both interior architects and customers recognise the practical advantages of Vescom vinyl wallcovering when compared with, for example, the often used paint. The combination of aesthetic and functional properties of Vescom vinyl wallcovering linked to the long maintenance-free use period is of decisive importance when selecting the ultimate wall finishing for these contracts.

The Vescom collections offer functional solutions with a unique combination of technical, commercial and aesthetic properties. Our products can be customised with digital prints and are scratchproof, impact-resistant, hygienic, optimally protected against bacteria and dirt, maintenance-friendly, lightfast, durable, flame retardant, easy and fast to apply, attractive and pleasant. In short: extremely suitable for applying in the education sector.

9 advantages of Vescom wallcovering for the education sector

fire safe

Vescom wallcovering complies with the strictest international requirements with regard to fire safety for public buildings.

long service life

Vescom products are of a high quality, strong and durable. They will easily last ten to fifteen years. Vinyl wallcovering, moreover, is scratchproof and impact-resistant. This is an important advantage when used in rooms with much activity, just as the fact that vinyl wallcovering bridges shrinkage and hairline cracks in the wall. Should the wallcovering be damaged, this can be simply repaired in a basically invisible manner.

minimum care

Vescom vinyl wallcovering can be easily cleaned and is maintenance friendly. It can be easily cleaned using standard household cleaners. In addition, a special cleaner is available with which nearly all types of stains can be easily removed. Vescom Cleaner is a mild, universal cleaning solution with which our wallcovering will continue to look as new.

sustainable products

Vescom aims at minimising the effect of its products on the environment during all the phases of their life cycle. Our products are well-known for their long service life and contract-suitable properties. Early replacement of our products is unnecessary while this is often the case with other products. This has the following significant advantage: less use of energy and raw materials in the interim period. This, of course, also leads to less waste. The products can also be used and cleaned efficiently without having to use chemical cleaners.

no loss of time and money

When a customer has made a choice from the Vescom range, the customer naturally wants to use it as soon as possible at the institution or organisation. This is possible. Our wallcovering is produced in our factories and can be supplied straight from stock in the required lengths. This will ensure that customers save on time and often also money.

fast, easy and clean to apply

Vescom vinyl wallcovering can be mounted quickly and does not require drying time. The product is odourless so the rooms can be used immediately after handling the product. The wallcovering can be applied seamlessly. Clean hanging instructions are available.

the alternative for paint

Its long lifespan, its quality of being scratchproof and impact-resistant and its full cleanability make vinyl wallcovering an excellent alternative for paint and glass fibre.

+print

Wallcovering prints with an image or design of choice is not a problem for Vescom. In addition to the choice from various structures as a surface (130 cm wide), the wall-to-ceiling version can also be selected for printing. The wall-to-ceiling quality can be horizontal and, therefore, processed seamlessly. Vescom's printing technologies guarantee a uniform, sharp and clear image. The functional and technical properties are retained because we use our famous vinyl qualities as the basis.

efficient applications

Vescom's wallcovering is crack-bridging and can be used on structural walls but also on partitions or system walls. This last application option offers many alternatives in, for example, large educational institutions where partition walls are often used.

A photograph of a classroom interior. The walls are covered in a solid orange-colored wallcovering. In the foreground, there are rows of light-colored wooden desks with dark metal frames. A doorway in the background leads to another room with similar furniture. The lighting is bright and even.
