ETHICS AND ENVIRONMENT

Jacaranda makes beautiful carpets and rugs, with an eye always on ethics and our environment

Natural fibres

We believe that wool makes the best carpets. Sheep grow new fleeces every year making wool renewable, it's recyclable too. Wool is soft and warm but hard-wearing and naturally fire retardant. Wool fibres are naturally coated in lanolin providing innate stain resistance.

For those that love shine, we hand-weave with the botanic fibre TENCEL™, winner of the "European Award for the Environment". More details on page 20.

Environmental certification

Jacaranda's Natural Weave Herringbone, Hexagon or Square, Taormina, Portofino and Positano all carry the Prodis rating. This is a European test which sets strict maximum levels for VOC emissions and chemicals. Manufacturers have to limit environmental impact and enhance user-friendliness through the entire life-cycle of the carpet, from production to recyclability. www.pro-dis.info/gut.

Jacaranda's Milford, Mavora, Mayfield, Midhurst and Tapanui ranges are all ECS certified under the Australian Carpet Classification Scheme. This provides independent assurances that each carpet meets high standards for the raw materials used

in manufacture and for product emissions, as well as product stewardship including lifecycle impacts and end-of-life management. Their ECS grading also guarantees that they meet the requirements set out by the Green Building Councils of Australia and New Zealand. www.carpetinstitute.com.au/environmental.

Ethical labour practices

Hand-weaving floorcoverings is extremely labour intensive and we at Jacaranda need to be sure that everyone concerned is well treated, and that no children are involved in our supply chain. For this reason we have for many years supported GoodWeave and our factories are available for random inspection by GoodWeave's inspectors at any time. GoodWeave was founded in 1995 to stop child labour in the handmade rug industry. This excellent international organisation promotes child-labour-free supply chains via its unique labelling scheme, which includes independent, unannounced producer inspections, monitoring and certification. GoodWeave also provides educational opportunities to children in weaving communities and works to ensure the fair treatment of adult carpet weavers. Please do read more at www.goodweave.org.uk.

THE ART OF HAND-WEAVING

Hand-weaving is an art that takes lots of time and skill

Each roll of Jacaranda handmade carpet passes through at least 130 skilled hands, across 208 hours, over approximately 26 days. From dyeing and drying yarn, winding bobbins, warping yarn and hand-weaving on looms; to adding and drying the backing, shearing, hand-finishing and quality control. Every pair of skilled hands involved at each stage, play their part in creating Jacaranda's wonderful natural colour bank and character filled textures. Let us take you through some of the stages of the craft.

Yarn & Warping

Yarn is wound onto bobbins with each bobbin taking 10 minutes to wind. Each roll of carpet requires around 1,200 bobbins, so it takes about 200 hours to wind enough yarn for just one roll of carpet. These bobbins are then wound around a large warping wheel to create long threads that form the basis of carpet production. The warping wheel takes at least four operatives to wind at all times, to ensure that no threads become tangled.

yarn & warping

Hand-weaving

Warp threads are threaded through the traditional wooden loom and tied in place, with these warp threads coming through to the front of the loom. 4-5 strong weavers are needed to work and keep the tension on each loom, without need for electricity. They move the wooden frames by hand and heddles by pedals to cross the warp yarns over long metal rods to create the pile. A traditional shuttle is thrown from left to right and back to interweave the cotton weft. The rods are either slid out to leave loop pile, or cut free to create velvet.

hand-weaving

Finishing

Latex is applied to the reverse of the carpet, then actionbac for structural stability. Large drying ovens have replaced sunshine, to allow production to continue during the monsoon.

Hand-sewing

All Jacaranda's handmade rugs from India are sewn around the edges by hand, in the same yarn as the roll, ensuring a stylish finish.

hand-sewing

Quality control

We love the quirkiness of texture that can only be made by hand, but hand-weaving cannot and does not set out to mirror the uniformity of 'machine made' carpet. Operatives check every inch of handmade carpet and use scissors to remove any stray yarns. Hand-held shearers create the smooth lustre of Jacaranda's velvets. All handmade carpets are inspected by Jacaranda's quality controller who compares the overall colour to the master, checks the pile height and that the pile is well-secured and even in colour. Every carpet shipped by Jacaranda carries the hand-written signature of our quality controller.

quality control

TENCEL™ is a botanic fibre acclaimed for its lustrous shine. It beautifully reflects light, and is the key ingredient of all the silky carpets and rugs in this 'natural shine' section. The pile moves when walked on like silk-velvet, and skilful dyeing allows a colour palette from Santushti's neutral shades to Satara's bright jewel-like tones. All Jacaranda's TENCEL™ carpets and rugs can be bespoke colour matched to paints or fabric samples, Pantones or poms, with no minimum order quantity.

sustainably grown

wood

pulp

TENCEL™ fibre

TENCEL™ is the best performing cellulose fibre for floorcoverings

The benefits of TENCEL™

	TENCEL™	VISCOSE
ECO-FRIENDLY PRODUCTION	99.8% of the solvents used to convert wood pulp to TENCEL™ are recycled and reused over and over again	Harmful chemicals such as caustic soda, carbon disulphide and sulphuric acid are used every time in a harsh production process
HARD WEARING USAGE CLASSIFICATION BS EN1307	Jacaranda's pure TENCEL™ ranges – Santushti, Satara & Sikkim achieve heavy domestic class 23 ratings	Majority of pure viscose carpets only achieve light domestic class 21 ratings
COLOURFASTNESS TO LIGHT ISO 105 B02 (8 = no change to 1 = severe change)	Jacaranda's pure TENCEL™ ranges score 6	Most pure viscose carpets score between 3 to 4
WATER SPILLAGE BS EN15115 (5 = no change to 1 = severe change)	Jacaranda's pure TENCEL™ ranges score 4	Pure viscose pile changes texture irrevocably and only scores around 2, unless blended with a harder wearing fibre such as wool
CLEANING	TENCEL™ floorcoverings can be professionally cleaned by dry or cold wet extraction methods	Viscose fibres are fragile and difficult to clean. Professional dry extraction recommended, unless part of a wool blend

All Jacaranda's floorcoverings are tested by independent companies to European safety standards, full results available on application

TENCEL™ key strengths:

- TENCEL™ is the best performing cellulose fibre for floorcoverings
- TENCEL™ carpets and rugs can be professionally, cold, wet cleaned
- Fibres are sustainable, biodegradable, hard wearing and manage indoor moisture, harbouring fewer bacteria for a healthier living environment
- They are naturally moth resistant and much more resilient than viscose
- A branded lyocell fibre, TENCEL™ is made by Lenzing AG in Austria, from wood pulp sourced exclusively from sustainably grown forests. Lenzing AG won the "European Award for the Environment", owing to very low emissions during TENCEL™ production, 99.8% of chemicals are used repeatedly in a closed loop system
- 'Viscose' and 'lyocell' are generic terms for fibres made around the world that carry no such guarantees
- All Jacaranda's TENCEL™ ranges are registered with Lenzing AG and certificates of authenticity can be downloaded from www.jacarandacarpets.com, beware of imitations always ask for proof

WILLINGDON

Construction: Hand-woven
Pile material: 100% pure wool

Create your own design and craft something totally unique, or match one of Jacaranda's designs to your colour scheme. Visit our Chelsea Harbour showroom or call head office and our trained staff will guide you from original idea to finished creation.

Himalayan hand-knotted rugs

If you can wait for the very best, Jacaranda's Himalayan rugs are hand-knotted in Nepal from Chinese silk and traditional Tibetan or New Zealand wool. Our Tibetan weavers create every individual knot by hand. They sit side by side at fixed looms, each weaver making individual knots over metal rods, which are then cut free to create the pile. The weavers count knots as they go, following by eye a graph fixed above them. It is very skilled work. They must all knot at the same tension and pace, creating on average just 10cms per day of high quality heirloom which has the structure and density to withstand many decades of use. We hold limited stocks of our most popular Himalayan rugs, sized 2 x 3m or 2.5 x 3.5m.

Hand-tufted floorcoverings

Hand-tufting is quicker than knotting, and creates smart, tough, contract rated floorcoverings made to measure in custom designs and colours. Skilled operatives use hand-held 'tufters' to punch New Zealand wool, silk or TENCEL™ tufts through a cotton mesh with the design printed on it. The rugs are backed with latex and a secondary cotton backing.

Colour matched hand-woven carpets & rugs

All Jacaranda's hand-woven TENCEL™ textures can be made in bespoke colours, matched to fabric, paint, Pantone or pom. We have no minimum order quantity.

RUG MAKER

Jacaranda can make all of the carpets in this brochure into rugs, and all rugs in custom sizes. Customers simply choose the texture, edging and size. Then contact our office for a quote, or order via the new 'rug maker' on our website. The main edging options are:

Hand-sewn

Our weavers in India literally use a needle to sew edges by hand, with the same coloured wool or TENCEL™ from which each rug is made. Every rug we hold in stock for immediate dispatch has these hand-sewn edges. We can hand sew custom sizes of all hand-woven textures.

Blind-hemmed

For this our most popular bespoke edging option, we match as closely as we can, a narrow cotton tape to your chosen rug centre. This we sew securely and turn back under the rug, to show as little as possible from above. The quickest option for a stylishly understated edge.

Bordered

Our leather, cotton or linen borders create a statement edge to any rug. View our stock border range at www.jacarandacarpets.com or Chelsea Harbour and head office showrooms. Please note that our leather borders include splices, because we prefer to use real leather rather than synthetic imitations.

Whipped

The edges of all but Jacaranda's thickest boucles can be over-locked by machine in a yarn of similar shade to the pile of the rug. This is the least expensive finish and delivery time is relatively short. Whipped edges are smart and hard-wearing, but more visible than Jacaranda's blind-hemmed edges.

The table opposite shows which Jacaranda ranges can be made-to-measure with which edges, and the normal delivery time for each option

GUARANTEES, DELIVERY, FITTING AND CARE

Guarantees

All Jacaranda’s floorcoverings are guaranteed for 5 years against manufacturing faults. In addition our TENCEL™ products carry a lifetime guarantee against moth damage. Our wool and wool blend carpets are guaranteed for 5 years against moth damage or until they are wet cleaned, at which point they must be re-proofed against insects.

Size tolerance

For broadloom please order 3% more than is required both on length and width. Hand-woven and hand-tufted rug sizes may vary by up to +/-2.5% and hand-knotted by up to +/-5%.

Colour variation

As with all natural fibres, colours may vary slightly between production batches. Please state at time of order where carpet cuts are to adjoin, so that we supply cuts from the same batch. Samples can also change colour over time especially in strong light. If an exact colour match is essential, please reserve stock and ask Jacaranda to send a ‘stock’ cutting.

Reservations

Jacaranda is happy to reserve stock for 48 hours, after which the reservation automatically lapses if the order is not confirmed.

Delivery

Jacaranda’s standard delivery times within mainland Britain are:

- Rugs from stock, 5 working days
- Broadloom from stock, 7 working days
- Custom sized blind-hemmed, bordered or whipped rugs, 5 weeks
- Hand-woven rugs made-to-measure with hand-sewn edges, 12 weeks
- Colour matched floorcoverings, 12 weeks from swatch approval
- Hand-tufted floorcoverings, 14 weeks from swatch approval
- Himalayan hand-knotted rugs, 16 weeks from swatch approval

For broadloom and rugs over 2m wide, standard deliveries can only be made to warehouse or retail premises in mainland Britain that provide manpower and equipment to unload. If your delivery address does not meet these criteria please call our head office for quotes on a dedicated vehicle.

Inspection

Please check that every delivery arrives with undamaged packaging, be sure to note any damage on the delivery note before you sign, and report it to Jacaranda immediately.

Jacaranda takes quality control very seriously and our return rate is exceptionally low. Despite this please check all floorcoverings within 48 hours of receipt. If you have any doubts or queries call us for advice **before** cutting and fitting.

Many of Jacaranda’s textures are hand-woven and small variations in colour and weave are desirable, providing handmade character. Customers seeking perfectly uniform textures should choose from among our machine made ranges.

Fitting broadlooms

Carpets should be fitted over good quality solid underlay and stretched onto double grippers. Seal all cut edges with seaming cement, and secure all seams with heat seaming tape.

Please do not use:

- Power stretchers which can damage hand-woven carpets
- Knee kickers on loop or cut & loop textures
- Self-adhesive carpet protector, which pulls threads when removed

In mainland Europe, carpets are routinely stuck to the floor, and this method may be used for Jacaranda’s broadlooms. Carpets may be fitted over underlay by the double stick method.

Cleaning and Care

Caring correctly for any carpet or rug is the key to it looking beautiful for many years. So please download a copy of Jacaranda’s Cleaning and Maintenance Manual from our website and note on it what fibres your floorcovering is made from. Even better, invest in Jacaranda’s Emergency Spot Cleaning Kit which comes with full instructions.

As with most fabrics and soft furnishings, spills of everyday liquids such as red wine or hot drinks will stain and can be difficult to remove:

- Act quickly to remove solids, then blot gently, changing paper as necessary until the paper comes back dry. Never scrub as this will ‘burst’ the pile surface causing permanent damage

- Before further action consult Jacaranda’s cleaning advice page under ‘fitting & care’ on our website, noting important differences between advice for TENCEL™, wool or viscose
- Avoid carpet cleaning chemicals sold for home use many of which contain bleaching agents, or leave a sticky residue which will attract dirt and amplify the stain
- If in any doubt call in the professionals, but because there are good and bad cleaners out there, we have posted those that we trust on our website

Carpets should be vacuumed very regularly. Cylinder machines with smooth nozzles are best for loop pile carpets, and upright models for cut piles. For everyday use we suggest that beater bars are turned off or placed on a gentle setting.

We do not believe that carpets automatically require an annual deep clean, but when you decide that one is needed, you should consult a Jacaranda approved cleaning professional.

For your guidance:

- For wool carpets we would expect them to recommend dry cleaning or hot (less than 70°C) water extraction, but never steam cleaning. Wool floorcoverings must be re-proofed against carpet moth after each deep clean
- For TENCEL™ and wool/viscose blends our preferred method is dry extraction. Cold wet extraction cleaning is possible for stubborn stains but specialist knowledge is essential, so do please use one of the companies recommended on our website
- All carpets treated with stain protection will need a new protective treatment after cleaning

Useful preventative measures:

- Barrier mats at entrances and cleaned regularly, will reduce dirt tracked onto your carpet
- Castor mats should be used under all castor chairs, even for carpets with a castor chair rating
- Furniture cups under the legs of furniture can reduce indentations
- Non-slip rug underlay such as that sold by Jacaranda will extend rug life considerably, as will rotating rugs regularly to spread wear

Common queries answered:

Pile reversal is a naturally occurring phenomenon in cut pile carpets, resulting from conditions where the carpet is laid rather than from manufacture. Pile reversal affects appearance but not resilience. Jacaranda can recommend a company able in most cases to reset the pile.

Shedding is perfectly normal for new cut pile carpets. It will not affect appearance or durability. With regular vacuuming, shedding will soon cease.

Sprouting or pulled loops are sometimes caused by dogs, cats or stiletto heels. Never pull these ‘sprouts’, instead carefully cut them at their base with sharp scissors.

Stain proofing treatments, we recommend for all of our TENCEL™ and viscose carpets. It won’t make carpets invincible, prompt removal of spills is still key, but treatments should buy time and make stains easier for professionals to remove. Stain treatments should always be applied by professionals, solvent based protectors in most cases are preferable, applied in several layers for optimum protection. Wool carpets are naturally more stain resistant than viscose or TENCEL™ ones and if you wish to stain proof new wool carpets please note that it is normal for them to ‘shed’ fibres where footfall is heaviest, leading possibly to uneven protection. Stain treatments can never offer complete protection and can lead to a false sense of security. They should be reapplied after every deep clean.

Underfloor heating. Most carpets can be used over underfloor heating systems, but wool is an insulator and slows the transfer of heat, the thicker the carpet the greater the thermal resistance which is measured as ‘tog’. Research by the Carpet Foundation has found that carpets and underlays with a combined 2.5 tog value allow underfloor systems to work efficiently, but that when tested in life-sized chambers the heat transfer is better than in the laboratory so combined togs of 3.5 perform in real-life situations closer to 2.5 tog, allowing underfloor heating to function well. TENCEL™ carpets and those in our machine made collections, tend to have lower tog values than comparable wool ones, making them a good choice over underfloor heating. You should consult your heating manufacturer about recommended tog ratings, and your carpet fitter as to the best underlay to keep togs low.

All Jacaranda's carpet ranges are tested to European or ISO standards by independent companies, the results are summarised and used to assign Floorcovering Standard Symbols (FCSS).

All our broadlooms carry the CE Mark, and Declaration of Performance documents (DOP's) may be downloaded from www.jacarandacarpet.com

	Class 21 - Light domestic use
	Class 22 - General/medium domestic use
	Class 22+ - General/medium to heavy domestic use
	Class 23 - Heavy domestic use

	Class 31 - Moderate contract, low or intermittent use
	Class 32 - General contract, areas with medium traffic
	Class 33 - Heavy contract, heavier traffic
	Class 34 - Very heavy, intense contract use

	Luxury - 5 tufts for the most luxurious, 1 tuft for the least
	Stairs - Recommended for all
	Stairs - Suitable for domestic buildings only
	Stairs - Not suitable

Approved for domestic castor chair use.
Castors cause extreme stress and wear, we recommend the use of protective castor mats even for carpets with this rating

Antistatic. Measured voltage is lower than 2kV after walking

Burning behaviour is strictly regulated for building products, fire categories for floorcoverings vary from B high to F low. Classes Cfl and Bfl are often required for public or commercial buildings but rules vary between countries. Classes D to B are subdivided with smoke density for S1 lower than for S2

Environmental certification under Australian Carpet Classification Scheme, see page 18

GUT environmental certification, see page 18

Colourfastness to light: 8 represents no change, down to 1 for severe fading

Colourfastness to rubbing and water: 5 represents no change, down to 1 for severe fading

Tog is a measure of thermal resistance and is used as an indication of compatibility with underfloor heating, see page 59
